

Free Spirit Technical Requirements

Electrical Requirements:

For all events, we require two (2) grounded, 20-Amp circuits on 120-Volt, 60 Hz AC that are dedicated solely for band use. Electrical source/outlets must be within 25 feet of the performance area. For very large or very small spaces, our requirements will vary slightly.

Stage:

Our preferred stage is 12' x 24' or larger. However, we can adapt our stage size requirements to many different or smaller venues. Let us know about your special needs and we can tailor our setup for your event.

For all outdoor events:

- We must have a level, dry, playing area (preferably an elevated stage), with proper protection from the elements.
- Tents should include sides and a hard surface for the band set up and performance. For safety reasons we cannot play if we are in direct contact with wet or damp ground.

For events with generator-supplied electricity we need the following:

- Entertainment-rated generator w/regulated output – 120V, 60Hz
- Two (2) 20 amp circuits dedicated solely for band use
- Generator must be properly grounded as per National Electrical Code and local regulations.

Setup:

We arrive three hours before the start of the event. That timeframe allows enough time to setup and perform a live sound check with the band before guests enter the room.

If your event requires a quick setup, we are happy to accommodate that with advanced notice. A typical “quick setup” takes about an hour.

If you require us to be set up more than one-hour prior to the start of your event, you may be assessed an additional early set up fee. Please contact us to see if these fees apply.
